Thinking Outside the Box: [The Path to a New Career \(/resources-docs/72615 The Path to a New Career.pdf\)](#)

Clinician:

Dental hygienists in a clinical role assess, diagnose, plan, implement, evaluate and document treatment for prevention, intervention and control of oral diseases, while practicing in collaboration with other health professionals. Examples of clinical settings include:

- Private dental practices
- Community clinics
- Hospitals
- University dental clinics
- Prison facilities
- Nursing homes
- Schools

Corporate:

Corporate dental hygienists are employed by companies that support the oral health industry through the sale of products and services. Leaders throughout the dental industry often employ dental hygienists due to their clinical experience and understanding of dental practice. Examples of corporate positions include:

- Sales representatives
- Product researchers
- Corporate educators
- Corporate administrators

Public Health:

Community Health programs are typically funded by government or nonprofit organizations. These positions often offer an opportunity to provide care to those who otherwise would not have access to dental care. Examples of public health opportunities include a variety of roles and settings:

- Clinicians, Administrators, Researchers
- State Public Health Officer
- Community Clinic Administrator
- Indian Health Service
- Head Start programs
- Local health departments
- National Health Service Corps
- School sealant programs
- Rural or inner city community clinics

Researcher:

Research conducted by dental hygienists can be either qualitative or quantitative. Quantitative research involves conducting surveys & analyzing the results, while qualitative research may involve testing a new procedure, product, or theory for accuracy or effectiveness. Examples of research settings include:

- Colleges and universities
- Corporations
- Governmental agencies
- Nonprofit organizations

Educator:

Dental Hygiene educators are in great demand. Colleges and universities throughout the U. S. require dental hygiene instructors who use educational theory and methodology to educate competent oral health care professionals. Corporations also employ educators who provide continuing education to licensed dental hygienists. Examples of education positions may be full time or part time and include:

- Clinical instructors
- Classroom instructors
- Program directors
- Corporate educators

Administrator:

Dental hygienists in administrative positions apply organizational skills, communicate objectives, identify and manage resources, and evaluate and modify programs of health, education and health care. Examples of administrative positions include:

- Clinical Director, statewide school sealant program
- Program Director, dental hygiene educational program
- Dean of Health Sciences, educational institution
- Executive Director, state association staff
- Director, corporate sales

Entrepreneur:

By using imagination and creativity to initiate or finance new commercial enterprises, dental hygienists have become successful entrepreneurs in a variety of businesses. Entrepreneurial opportunities developed by dental hygienists include:

- Product Development and Sales
- Practice Management Company
- Employment Service
- CE provider or Meeting Planner
- Consulting Business
- Founder of Nonprofit
- Independent Clinical Practice
- Professional Speaker / Writer

Dental Hygienist

Job Description

A career as a dental hygienist offers a wide range of challenges. In the dental office, the dentist and the dental hygienist work together to meet the oral health needs of patients. Since each state has its own specific regulations regarding their responsibilities, the range of services performed by hygienists varies from state to state. Some of the services provided by dental hygienists may include:

- patient screening procedures; such as assessment of oral health conditions, review of the health history, oral cancer screening, head and neck inspection, dental charting and taking blood pressure and pulse
- taking and developing dental radiographs (x-rays)
- removing calculus and plaque (hard and soft deposits) from all surfaces of the teeth
- applying preventive materials to the teeth (e.g., sealants and fluorides)
- teaching patients appropriate oral hygiene strategies to maintain oral health; (e.g., tooth brushing, flossing and nutritional counseling)
- counseling patients about good nutrition and its impact on oral health
- making impressions of patients' teeth for study casts (models of teeth used by dentists to evaluate patient treatment needs)
- performing documentation and office management activities

Career Advantages

Dental hygiene offers the following challenges and rewards:

Personal satisfaction: One of the most enjoyable aspects of a career in dental hygiene is working with people. Personal fulfillment comes from providing a valuable health care service while establishing trusting relationships with patients.

Prestige: As a result of their education and clinical training in a highly skilled discipline, dental hygienists are respected as valued members of the oral health care team.

Variety: Dental hygienists use a variety of interpersonal and clinical skills to meet the oral health needs of many different patients each day. Hygienists have opportunities to help special population groups such as children, the elderly and the disabled. They may also provide oral health instruction in primary and secondary schools and other settings.

Creativity: Because dental hygienists interact with such diverse population groups, they must be creative in their approach to patient management and oral health education.

Flexibility: The flexibility offered by full- and part-time employment options and availability of evening and weekend hours enable dental hygienists to balance their career and lifestyle needs. Hygienists also have opportunities to work in a wide variety of settings including private dental practices, educational and community institutions, research teams and dental corporations.

Security: The services that dental hygienists provide are needed and valued by a large percentage of the population. There is currently a great demand for dental hygienists. Employment opportunities will be excellent well into the future. Due to the success of preventive dentistry in reducing the incidence of oral disease, the expanding older population will retain their teeth longer, and will be even more aware of the importance of regular dental care. With the emphasis on preventive care, dentists will need to employ more dental hygienists than ever before to meet the increased demand for dental services.

Opportunities

Hygienists are in demand in general dental practices and in specialty practices such as periodontics or pediatric dentistry. They also may be employed to provide dental hygiene services for patients in hospitals, nursing homes and public health clinics.

Depending upon the level of education and experience achieved, dental hygienists can apply their skills and knowledge to other career activities such as teaching hygiene students in dental schools and dental hygiene education programs. Research, office management and business administration are other career options. Employment opportunities also may be available with companies that market dental-related materials and equipment.

Job Outlook, 2014-24 ?	19% (Much faster than average)
Employment Change, 2014-24 ?	37,400

Dental hygienists examine patients' teeth and gums for signs of oral diseases or abnormalities.

What Dental Hygienists Do

Dental hygienists clean teeth, examine patients for signs of oral diseases such as gingivitis, and provide other preventive dental care. They also educate patients on ways to improve and maintain good oral health.

Work Environment

In 2014, almost all dental hygienists worked in dentists' offices, and more than half worked part time.

How to Become a Dental Hygienist

Dental hygienists need an associate's degree in dental hygiene. Programs typically take 3 years to complete. All states require dental hygienists to be licensed; requirements vary by state.

Pay

The median annual wage for dental hygienists was \$72,910 in May 2016.

Job Outlook

Employment of dental hygienists is projected to grow 19 percent from 2014 to 2024, much faster than the average for all occupations. Ongoing research linking oral health to general health will continue to spur demand for preventive dental services, which are provided by dental hygienists.
